# CONTROLS

## DIMMING

**Dimming lights by 50% = up to 40% lighting savings**

(uses only 60% of the energy required)

A wide range of dimming options are available depending on sensor requirements or facility lighting control method.

0-10V control is standard.

DALI, Lutron Eco-System and others are optional.

## DAYLIGHT/OCCUPANCY SENSOR

**Up to 20% lighting energy savings**

Combination sensor for automatic ON/OFF control with ambient light sensing. If occupancy is detected within the sensor's coverage area, and if there is insufficient ambient light, the fixture will turn on. When occupancy is no longer detected and the time delay has elapsed, lighting automatically turns off. Time delay and light sensor are user adjustable.

## DAYLIGHT SENSOR

**Up to 20% lighting energy savings**

Optional low-profile user-adjustable integrated Daylight Sensors automatically adjust lumen output as ambient light levels change.

Sensors are internally connected to 0-10V dimming

## OCCUPANCY

**Up to 20% lighting energy savings**

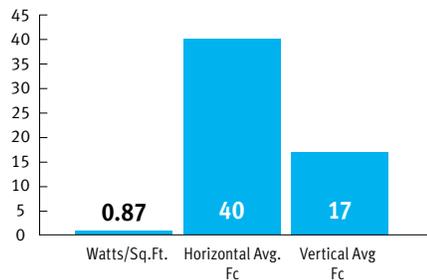

Optional low-profile integrated Occupancy Sensors automatically turn fixture ON or OFF depending on activity within the sensor area.
